

Tick Testing Labs for the General Public

If you choose to have a tick tested, it is important to remember:

- Tick testing results may produce a false positive or a false negative result. Continue to monitor yourself for symptoms. If you develop a rash, fever or other signs and symptoms, talk to your health care provider.
- If you have been infected by a tick bite, signs and symptoms may occur even before the results of tick testing are available. You should not wait for tick testing results before seeking medical advice if you feel sick.

The Atlantic County Division of Public Health provides the following list as a public service; however, the county is not affiliated with any of these agencies. Inclusion on this list does not imply endorsement. All laboratories should be contacted directly for pricing on tests offered.
